PREFACE

The National Education Policy, also known as NEP-2020, is based on the rich heritage of ageless Indian philosophy and knowledge. India's knowledge systems, Jnan, Vignan, and Jeevan Darshan, have evolved through experience, observation, experimentation, and in-depth analysis. This legacy of validating and putting into practice has impacted education, the arts, administration, law, justice, health, manufacturing, and commerce. This has affected the classical languages of Bharat as well as other languages that were handed down orally, in writing, and through creative traditions. It includes an awareness of the accomplishments and challenges of ancient India as well as an awareness of the country's future aspirations concerning health, education, the environment, and pretty much every aspect of life.

Indian Knowledge Systems (IKS) is an innovative unit at AICTE, New Delhi, that falls under the Ministry of Education (MoE). It was founded to encourage multidisciplinary study on all facets of IKS and to conserve and share IKS for future study and social applications. It will actively work to disseminate traditional knowledge in the fields of arts and literature, agriculture, basic sciences, engineering and technology, architecture, management, and economics, among other fields, as well as our rich national legacy.

Using our ancient knowledge systems—which are distinguished by an unbroken tradition of knowledge transfer and a unique point of view—to solve present and emerging issues in India and the world is the primary objective of learning from the past and integrating Indian knowledge systems (Bhāratiyu Drishti).
